Cosmos bipinnatus

Casanova

Red

Item no.: CB0202R

- Compact habit for pot and container production
- Long flower stems with huge flowers
- Great border plant
- Short crop time

Crop Time	Spring: 7 - 10 weeks
Height ⌀	12 " / 30 cm
Exposure	Sun - Partial shade
Seed Form	Raw
Product Use	Bed, Landscape

TECHNICAL GUIDE

Cosmos bipinnatus Casanova

Stage I Starts with the radicle breaking through the testa. The roots are touching the medium. Ends with fully developed cotyledons.
Stage II Starts from fully developed cotyledons. Ends with the fully developed true leaf or true leaf pair.
Stage III Starts from the fully developed true leaf or true leaf pair and ends with 80% of the young plants being marketable.
Stage IV All young plants are ready for sale and in the process of being hardened off. This stage lasts about 7 days.

The cultural recommendations are based on results from trials conducted under Central European conditions. Different conditions in other parts of the world may lead to deviations in results achieved.
