

Carex comans

Zora

Sedge

Culture guide

Uses:

Pots and combinations

Exposure:

Sun - Partial shade

Garden height:

14" / 35 cm

Crop time:

16-18 weeks

Sowing method:

6-10 seeds in plugs

Germination:

Stage I (7-14 days)

Cover: Place a light cover of vermiculite over the seeds

Light: No additional lighting is needed in the plug stages.

Temperature: Maintain day temperatures of 75-80 °F (24-27 °C) and night temperatures of 65-68 °F (18-20 °C). There is a direct relationship between temperature fluctuation and germination in Carex. The larger the fluctuation in ambient temperature between day and night set points, the higher the germination rate.

Relative humidity levels: Levels of 95% or higher are optimal.

Moisture: Keep media moist; do not allow media to dry out

Media: pH: Maintain media pH of 5.5-6.5 EC:

Growing On:

Transplant plugs after 5-7 weeks. Maintain temperatures of 60-65 °F

(15-18 °C). Fertilize at 150-200 ppm nitrogen.

Maintain pH levels of 5.5-6.0 and EC

levels of

Media:

Maintain media pH of 5.5-6.5, EC:

Temperature:

Maintain day temperatures of 25 °C and night temperatures of 15 °C. There is a direct relationship between temperature fluctuation and germination in Carex.

The larger the fluctuation in ambient temperature between day and night set points, the higher the germination rate.
