

Festuca valesiaca var. glaucantha ***Buddy Blue***

Wallis Fescue

Culture guide

Uses:

Foliage plant, heath and rock garden, roof coverage, graveyard plantings, soil coverage

Exposure:

Sun

Garden height:

12" / 30 cm

Crop time:

14-16 weeks

Sow time:

January-March

Sowing method:

6-10 seeds in plugs

Germination:

7 days at 41-50 °F (5-10 °C), then 68-77 °F (20-25 °C) for an additional 3-5 weeks until germinated.

Growing On:

Grow on at 50-65 °F (10-18 °C).

Media:

Sandy humus, minerals and small grit, pH-value:
5.5-7.5

Temperature:

10-18 °C.

Fertilization:

Low fertilization levels are required. Over fertilization will result in weak flower stems.
