

Pentas lanceolata
Northern Lights[®] ***Lavender***
Star-Cluster

Culture guide

Uses:

large containers, garden specimens and mass
landscape plantings

Exposure:

Sun

Garden height:

20" / 52 cm

Crop time:

14-18 weeks

Sow time:

from January on

Sowing method:

1 Pill per cell

Germination:

Sow seed in a media with a pH between 5.8 and
7.2. Maintain uniform soil moisture levels and
humidity levels above 95 %. Stage I temperatures
of 75-80 °F (23-26 °C) optimize germination.

Water with warm water to avoid shocking
seedlings during Stage I.

Do not cover seed as light increases germination
rate and improves seedling uniformity. Begin light
feeding with

25-50 ppm nitrogen. Continue Stage I conditions
for 7-10 days.

Growing On:

Transplant plugs into 4-6" (10-15 cm) pots or
hanging baskets. Grow on at 60-68 °F (15-20 °C).
Fertilize at 100-150 ppm nitrogen in a
well-balanced mix. Monitor soil pH levels and
maintain a pH above 6.3.
