### **Crop time**

Spring: 43 weeks

### **Height**

10 ? / 25 cm

### **Exposure**

Sun - Partial shade

### **Seed form**

Pelleted Seed

## Culture guide

### Sowing method

Sow 6-8 seeds per cell in a 128 or 264 tray (or comparable format).

### Media

Fine loose substrates or glued plugs are suitable growing media. Maintain a pH value of around 4 (3.8 to 4.5).

In the beginning, the EC value should not exceed 1 to 1.25 mS/cm. Always use or mix with rainwater, if possible.

Higher light and temperature levels will encourage germination. A soil temperature of 20 °C and high humidity ensure the best germination results. The first phase, from germination until the established young plant, is approximately 8 weeks. Finished young plants after approximately 13 weeks.
