Festuca valesiaca var. glaucantha Buddy Blue

Item no.: Z0601

Crop Time
Spring: 14 - 16 weeks

Height
25cm

Exposure
Sun

Seed Form
Raw Seed

Hardiness Zone
4 - 8

Best Uses
Landscape, Rockery

Culture guide

Usage
Foliage plant, heath and rock garden, roof coverage, graveyard plantings, soil coverage

Sow time
January-March

Sowing method

info@benary.de | www.benary.de
6-10 seeds in plugs

**Germination**

7 days at 41-50 °F (5-10 °C), then 68-77 °F (20-25 °C) for an additional 3-5 weeks until germinated.

**Growing on**

Grow on at 50-65 °F (10-18 °C).

**Media**

Sandy humus, minerals and small grit, pH-value: 5.5-7.5

**Temperature**

10-18 °C.

Stage I Starts with the radicle breaking through the testa. The roots are touching the medium. Ends with fully developed cotyledons.

Stage II Starts from fully developed cotyledons. Ends with the fully developed true leaf or true leaf pair.

Stage III Starts from the fully developed true leaf or true leaf pair and ends with 80% of the young plants being marketable.

Stage IV All young plants are ready for sale and in the process of being hardened off. This stage lasts about 7 days.

The cultural recommendations are based on results from trials conducted under Central European conditions. Different conditions in other parts of the world may lead to deviations in results achieved.
