

Viola witrockiana F<sub>1</sub>

# Inspire® Plus

**Orange**

Item no.: VW0212R/E

**Most Advanced Breeding in Large-Flowered Pansies**

- Ideal for spring and fall production
- Uniform flower timing and habit across the series
- Short flower stems, compact plants – no stretching!
- Outstanding seedling quality

<b>Crop Time</b>	Spring: 25 - 26 weeks , Autumn: 12 - 14 weeks
<b>Height Ø</b>	7 " / 18 cm
<b>Width Ø</b>	7 " / 18 cm
<b>Exposure</b>	Sun
<b>Seed Form</b>	Raw Seed, BeGreen Priming
<b>Product Use</b>	Packs, Pots, Mixed Containers, Landscape, Mass Plantings
<b>Family, Origin</b>	Violaceae, Europe
<b>Minimum Germ. Rate</b>	90 %

## TECHNICAL GUIDE

Viola wittrockiana F<sub>1</sub> Inspire® Plus

### Usage

Packs, Pots, Mixed Containers and Landscape/Mass plantings

### Sowing method

1 seed per plug

### Germination

Optimum conditions for seedling development, beginning on the day of sowing until radicle emergence. Expect radicle emergence in 2-4 days.

### Temperature

65-68 °F (18-20 °F) until radicle emergence, then lower the temperature gradually to 62-65 °F (17-18 °C).

### Fertilization

Begin feeding early using a calcium based fertilizer at lower rates to keep the an adequate amount of calcium and nitrogen supplied to the seedlings. On days 5-7 begin feeding with a calcium based fertilizer (14-2-14, 13-2-13, 15-5-15, 17-5-17) at 50-60 ppm. Maintain the EC between 0.5 and 0.75. Keep phosphorous levels between 6-8 ppm and boron supplied at 0.5 ppm.

### Expert Tip

Maintain pH levels below 5.8 to avoid outbreaks of thielaviopsis and boron deficiencie. When the plugs are ready for transplanting, do not hold them as they can get root bound.

**- Julian, Area Sales Manager**

---

Stage I Starts with the radicle breaking through the testa. The roots are touching the medium. Ends with fully developed cotyledons.

Stage II Starts from fully developed cotyledons. Ends with the fully developed true leaf or true leaf pair.

Stage III Starts from the fully developed true leaf or true leaf pair and ends with 80% of the young plants being marketable.

Stage IV All young plants are ready for sale and in the process of being hardened off. This stage lasts about 7 days.

The cultural recommendations are based on results from trials conducted under Central European conditions. Different conditions in other parts of the world may lead to deviations in results achieved.

## COLORS OF THE SERIES
