

# Zinnia elegans Benary's Giant Wine

Item no.: Y5861

## **Crop Time**

Spring: 9 - 11 weeks

## **Height**

120cm

## **Exposure**

Sun

## **Seed Form**

Raw Seed

## **Best Uses**

Bedding, Cutflower

## **Culture guide**

### **Usage**

Plants for bedding, pot plants, beautiful plants, that attract bees and butterflies, cut flower production

### **Sow time**

Indoor forcing: February-March for flowering in pots from July onwards; Outdoor forcing (frost free):

End May, can be sown directly into field

### **Sowing method**

1 seed per plug

## **Germination**

7-10 days at 68-72 °F (20-22 °C). Higher temperatures can reduce germination and cause weak seedlings. Sow seeds in a well-drained media low in nutrients with a pH between 5.8-6.2. Cover seed lightly with vermiculite.

## **Growing on**

Grow on at 60-65 °F (15-18 °C) for 3-4 weeks. Temperatures below 60 °F (15 °C) delays flowering. Provide good ventilation. Fertilize weekly at 200 ppm nitrogen in a well-balanced mix. Use of calcium nitrate will improve stem strength. For cut flower production, thin seedlings or plant plugs at 8-10" (20-25 cm) in rows or 9-12" x 12" (23-30 cm x 30 cm) spacing in beds.

## **Media**

Use a well-drained, growing perennial substrate with 15-30 % clay, 1-1,5 kg/m<sup>3</sup> complete balanced fertilizer, iron-chelate, micronutrients, pH: 5.8-6.2. Field: loamy, sandy, humus soils with good drainage. Disinfect the soils in greenhouse or polytunnel before planting. Standard fertilization: 80-100 g/m<sup>2</sup> of a slow release fertilizer.

## **Temperature**

Grow at 15-16 °C or outdoors. temperatures below 10 °C promote yellow leaves. Zinnia does tolerate high temperatures of 25 °C, but does not tolerate frost. It is recommended to harden for selling the plants slowly at 12-14 °C. In field Zinnia prefers warm and sunny location. Protect the plants against

wind.

---

Stage I Starts with the radicle breaking through the testa. The roots are touching the medium. Ends with fully developed cotyledons.

Stage II Starts from fully developed cotyledons. Ends with the fully developed true leaf or true leaf pair.

Stage III Starts from the fully developed true leaf or true leaf pair and ends with 80% of the young plants being marketable.

Stage IV All young plants are ready for sale and in the process of being hardened off. This stage lasts about 7 days.

The cultural recommendations are based on results from trials conducted under Central European conditions. Different conditions in other parts of the world may lead to deviations in results achieved.
