

Viola wittrockiana F₁

Wine Country Mix

Item no.: VW0291E

Most Advanced Breeding in Large-Flowered Pansies

- Ideal for spring and fall production
- Uniform flower timing and habit across the series
- Short flower stems, compact plants no stretching!
- Outstanding seedling quality

Technical Guide: Click here

All information in our technical guide is based on our own trials and would therefore be as guideline only. Detailed cultivation aspects vary depending on climate, location, time of year and environmental conditions. Benary expressly disclaims any responsibility for the content of such data/information and makes no representation or warranty for the cultivation of any products listed. It is recommended that growers conduct a trial of products under their own conditions.

Only available in North America.

Crop Time	Spring: 25 - 26 weeks , Autumn: 12 - 14 weeks
Height ø	7 ″ / 18 cm
Width Ø	7 ″ / 18 cm
Exposure	Sun
Seed Form	Raw Seed, BeGreen Priming
Best Uses	Bedding, Landscape

CULTURE GUIDE

Viola wittrockiana F₁ Inspire[®] Plus

Usage

Packs, Pots, Mixed Containers and Landscape/Mass plantings

Sowing method

1 seed per plug

Germination

Optimum conditions for seedling development, beginning on the day of sowing until radicle emergence. Expect radicle emergence in 2-4 days.

Temperature

65-68 °F (18-20 °F) until radicle emergence, then lower the temperature gradually to 62-65 °F (17-18 °C).

Fertilization

Begin feeding early using a calcium based fertilizer at lower rates to keep the an adequate amount of calcium and nitrogen supplied to the seedlings. On days 5-7 begin feeding with a calcium based fertilizer (14-2-14, 13-2-13, 15-5-15, 17-5-17) at 50-60 ppm. Maintain the EC between 0.5 and 0.75. Keep phosphorous levels between 6-8 ppm and boron supplied at 0.5 ppm.

Stage I Starts with the radicle breaking through the testa. The roots are touching the medium. Ends with fully developed cotyledons. Stage II Starts from fully developed cotyledons. Ends with the fully developed true leaf or true leaf pair. Stage III Starts from the fully developed true leaf or true leaf pair and ends with 80% of the young plants being marketable. Stage IV All young plants are ready for sale and in the process of being hardened off. This stage lasts about 7 days.

The cultural recommendations are based on results from trials conducted under Central European conditions. Different conditions in other parts of the world may lead to deviations in results achieved.
