## CULTURE GUIDE

Verbena bonariensis Vanity

### Usage

Border plant, containers, landscape – ideal for mixtures

### Sowing method

3-5 seeds per plug for 12-19 cm pots, 1-2 seeds per plug for 9-12 cm pots, direct sowing is also possible. Cover the seeds thinly with vermiculite.

### Germination

Maintain optimal conditions for seedling development, should begin on the day of sowing until root emergence. Expect the emergence of the first seedlings after 14 days. Avoid a high humidity.

### Growing on

Facultative long day plant, flowering more quickly under a long day length. Typical cultivation as a flowering annual that flowers from June to late october.

### Media

Use a well-drained, pre-fertilized growing substrate with 20-30 % clay. pH 5.8-6.2; E.C. 1.2-1.5. In field Verbena likes a humus, sandy-loamy soil with good drainage

### Temperature

20-22 °C for germinating. The seedlings should be grown at an average temperature of 18 °C.

### Fertilization

Verbena requires a high fertilization level with a weekly dose of nitrogen. Also a good potassium level is important. But avoid high ammonium or nitrogen levels during the growing.
